My learning with AI experience

- Dillon Carpenter

Data Visualization

- Most of my learning came from my Data Visualization Class
- However, I did find that Claude can make pretty good line plots
- These were very useful in diagnosing neural network models

Val loss

- That was the final results for my final model
    - Trained on the Entire Sample
- Its clear that the model had learned something, but now its plateuing after 12 hours of training
- This suggests potential underfitting
- Overall very healthy
